

GENERAL SURGERY

General Surgery is a broad surgical specialty focused on the digestive tract and abdominal organs, including the esophagus, stomach, intestines, liver, pancreas, and gallbladder.

General surgeons are trained to diagnose and manage a wide range of conditions that may require surgical intervention.

They treat breast, skin, head and neck and blood vessel issues, and manage trauma and critical patients.

Skilled in both traditional and minimally invasive surgical techniques, general surgeons play a crucial role in pre-operative, operative, and post-operative care, often as leaders of a surgical team.
